Liquidity Risk Management

The liquidity risk is the risk of the entity being unable to fulfil its cash or collateral requirements, current or future, foreseen or unforeseen.

Liquidity risk is managed through the Liquidity Risk Framework which is designed to maintain liquidity resources that are sufficient in amount and quality, as well as an adequate and diversified funding profile. This is achieved via a combination of policies (Local & Group), including amongst others regular review, proper governance framework, analysis, stress testing, limit setting and monitoring.

BNP Paribas SA Hong Kong branch Asset and Liability Committee (“BNPP HK ALCO”) is responsible for the oversight of liquidity risk, including:

- Defining the liquidity risk profile and related quantitative guidelines
- Monitoring compliance with regulations
- Steering businesses so that they operate within the funding capacity
- Supervising the liquidity risk monitoring indicators
- Deciding upon and monitoring the execution of the liquidity risk mitigating strategies (funding and liquidity reserves) in business as usual conditions

BNPP HK ALCO frequency is quarterly and it is chaired by BNPP HK Chief Executive Officer (CEO) with the compulsory participation of representatives from ALM Treasury, Finance, RISK and Chief Operating Officer (COO).

ALM Treasury is a transversal activity and is responsible for the operational liquidity risk management for all maturities, including intraday, in both business-as-usual conditions and in crisis situation. ALM Treasury activity is governed by ALCO and dedicated policies and procedures, ensuring sound and prudent liquidity management. This activity is under the independent assessment, monitoring and control of RISK.

An outline of Contingency Funding Plan (CFP) / Liquidity Contingency Plan (LCP)

Liquidity Contingency Plans (LCPs) are designed to provide a framework to handle a liquidity crisis. The governance of the LCP is based on the ALCO which becomes a Liquidity Crisis Committee (LCC) to monitor the situations, make crisis management decisions and monitor the execution of those decisions.

The LCP Policy describes the circumstances in which the LCP is activated as a result of actual or potential adverse events. Those events are identified by quantitative Early Warning Indicators (EWIs) or a qualitative assessment of the liquidity situation.

Once the LCP is activated, the Liquidity Crisis Committee (LCC) is responsible for the execution of crisis management with the determination of appropriate responses and the coordination of the involved parties. Operationally, LCC mitigation actions essentially consist of strengthening the liquidity situation, if possible, in the emergence phase of a crisis and, if necessary monetizing the Counterbalancing Capacity to offset net cash outflows in a more severe crisis. The LCP sets out a list of potential mitigating actions which the LCC may elect and execute the most appropriate ones, depending on the circumstances. There is no pre-determined program of actions since these vary depending on the type and severity of the crisis.

The list of mitigating actions is diverse to deal with a wide range of adverse circumstances, both systemic and idiosyncratic and LCC would consider the interdependencies and ramifications of its potential actions.

Liquidity stress-tests

Internal Liquidity Stress testing (ILST) is part of liquidity risk management of BNPP HK Branch – being part of its overall governance as well as the monitoring indicators. The objective of stress testing is to measure the cash outflows and inflows under severe and plausible crisis scenarios, which allow us to size the Counterbalancing Capacity accordingly.

The Counterbalancing Capacity is composed of cash deposited at the Central Bank and assets that may be monetized in order to raise cash. The final output allows assessing the potential for net liquidity shortfalls under liquidity stressed circumstances for multiple horizons. The ILST assumptions are described in the ILST Policy which is reviewed annually and submitted to ALCO for approval. ILST results are computed monthly on different time horizons and using three types of scenarios (idiosyncratic, systemic crisis, and combined crisis scenarios) and reviewed by ALCO who is acting as a decision-maker on appropriate responses - should the results be deemed unsatisfactory.

Funding Strategy

Group Overall Framework

At Group level, internal liquidity risk management and internal monitoring are based on a range of indicators at various maturities. These indicators are measured on a regular basis by currency and maturity. The monitoring indicators relate to the funding needs of the Group’s businesses under both normal and stressed conditions. These monitoring indicators are part of the Group’s budget planning exercise with set objectives that are routinely monitored (monthly).

The funding needs associated with the activity of the Group’s businesses are managed in particular by measuring the difference between commercial funding needs (customer loans and overdrafts, trading assets) and commercial funding resources (customer deposits, sale of the Group’s debt securities to customers, etc.). This indicator makes it possible to measure the business lines’ liquidity consumption under a normal business scenario. It is supplemented by indicators to measure the funding needs of the business lines in one month and one year depending on the assumptions defined by European regulations in force (Liquidity Coverage Ratio) or anticipated in a one-year perspective (Net Stable Funding Ratio). In addition to this commercial funding need indicators, the Group closely monitors the Counterbalancing Capacity and the funding provided by ALM Treasury, as well as the Group’s structural resources (i.e. net own funds).

Business lines’ consumption of liquidity is fully factored in the Group’s budget process, wherein each business line estimates its future liquidity needs, in keeping with its profitability targets and capital consumption objectives. During the iterative budget process, liquidity consumption objectives are allotted to the business lines, taking into account the funding provided by ALM Treasury and structural resources, in line with the Group’s overall target. This process is regularly reviewed, monitored and adjusted as appropriate throughout the year by the Group ALCO.

All of the Group's assets and liabilities are subject to internal liquidity pricing, the principles of which are decided by the Group ALCO and aim to take account of trends in the cost of market liquidity and the balance between assets and liabilities within the Group's development strategy.

At BNPP HK Branch level, those principles are implemented through the below framework

- A weekly Liquidity dashboard to monitor the soundness of the balance-sheet structure
- Monthly Liquidity Stress Tests
- The set-up of Early Warning Indicators (EWIs) to help identifying potential deterioration of market circumstances or funding profile – including regulatory ratios
- A yearly Funding Plan validated by ALCO at the beginning of the year and reviewed by ALCO on a quarterly basis.

Wholesale funding monitoring indicators

The Group has adopted a broad definition of wholesale funding, covering all funds excluding those provided by:

- retail customers, SMEs and corporates;
- institutional clients for their operating needs (e.g. portion needed for custody management);
- monetary policy and funding secured by market assets.

This definition is broader than market funding. For example, it includes medium- to long-term debt placed in funds for individuals and, in the short-term portion, non-operating deposits in the Securities Services business.

The Group has a conservative policy for the management of its wholesale funding by ensuring that it does not depend on very short-term funding and diversifying these funding sources.

Thus at Group level, wholesale funding with an original maturity of less than one month, so-called very short-term wholesale funding, is systematically "sterilized" by being placed in immediately-available deposits in central banks so that they are not used to fund the Group's business.

The Group ensures that short-term wholesale funding (with original maturity of between 1 month and one year) is diversified in terms of counterparty, business sector and residual maturity. Any excess concentration on one of these criteria is systematically "sterilized" and placed in central bank deposits. Medium- to long-term wholesale market funding (with original maturity over 1 year) is diversified in terms of investor type, distribution network, financing programme (secured or unsecured), and by geographical area to ensure diversification. Furthermore, the Group aims to optimize the term structure of its funding operations.

At BNPP HK Branch level, the same principles apply with a main focus on Short-Term Wholesale Funding.

Medium- to long-term liquidity position

The medium-to long-term liquidity positions are measured regularly at Group level by entity and by currency to evaluate the medium-to long-term resources and uses. To this end, each balance sheet item is given a maturity in an economic approach using models and conventions offered by ALM Treasury and reviewed by the RISK Function, or a regulatory approach by applying standardized weightings of the Net Stable Funding Ratio as anticipated for its application in Europe.

At BNPP HK Branch level, MLT Liquidity Gap guidelines have been defined and approved by ALCO and exposures are measured and reported quarterly to ALCO.

Liquidity Reserve

At Group level, the liquidity reserve consists of assets held by ALM Treasury and the capital market businesses. The liquidity reserve comprises:

- deposits with central banks;
- available assets that can be immediately sold on the market or through repurchase agreements;
- available securities and receivables that can be refinanced with central banks

At BNPP HK Branch level, the liquidity reserve is monitored on a daily basis.
